

Generating pdf files

1. InDesign - Use Daniels pdf preset "*Daniels Hi Res.joboptions*" loaded in Adobe Pdf Presets. Works in all versions of InDesign and usually on both Mac and PC platforms. This can be downloaded from our website at www.danielspc.com.au by clicking on the High Resolution Distiller Setting.
2. QuarkXpress - Create a high resolution postscript and distill through Adobe Distiller using Daniels setting "*Daniels HiRes.joboptions*".

All supplied pdfs must have a minimum of 3mm bleed plus trims. Artwork should be set up to actual trim size. Please supply multi page publications as single page pdfs and not spreads. Covers and folders should have 5mm bleed and it is preferable to supply folders with artwork and diecuts on the same page with the diecut set to overprint. This will enable us to supply more accurate proofs.

If any client is experiencing difficulty with providing pdfs please call Prepress at Daniels Printing Craftsmen on 9204 6812 for assistance.
